

Fork Positioner for Forklifts

Fork Positioner for Forklifts - A fork positioner is actually a device made out of top quality materials designed to be able to endure the most difficult procedures and work environments. This particular piece of equipment could enable the one driving to be able to maneuver the blades hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the arms or the entire load so as to facilitate more exact carrying and placement in a quicker and much more efficient way.

The blade pocket is quite unique and enables the individual operating it to securely swing the forks into position without any worry of damaging the positioning cylinders. This allows the operator the choice to be able to execute independent or simultaneous fork movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be transformed into fork positioners on existing units.
